

Agenda Item 6b. Planning Process: Review of Existing Groundwater Supplies in Region F

This agenda item is to review existing groundwater supplies based on Modeled Available Groundwater (MAG) values that have been finalized by TWDB and provide an update on the status of MAG values that have not yet been finalized by TWDB. The TWDB has issued final MAG reports in Groundwater Management Areas (GMA) 2 and 8, and those MAG values will be compared to the MAG values used in the previous round of planning. The TWDB has not issued MAG reports for GMA 3 and 7. Therefore, draft MAG values developed through the Joint Planning process in GMA 3 and 7 will be reviewed. The TWDB has estimated that the MAG values for GMAs 3 and 7 will not be available until mid-summer.
